What Is Banana Roll Liposuction?

The term “banana roll” refers to the pocket of fat that forms beneath the buttocks, often causing sagging or bulging in that region. This type of fat is notoriously resistant to exercise and diet, especially for women, and can impact the overall shape of the thighs and buttocks.

Banana Roll Liposuction in Hyderabad involves the precise removal of this fat through minimally invasive techniques, helping to lift and define the gluteal crease. The goal is to create a smooth transition between the buttocks and the upper thigh, resulting in a tighter, more toned lower body contour.
